

SCG validation - Gemini Enterprise for CX - 2026-09-24

Validated file: `_src/geminiCustomerExperienceGuidance.csv` after the 2026-09-24 audit fixes recorded in `notes/SCG-remediation-2026-09-24.md`. All checks were run programmatically against the file on disk.

Result

Pass - 0 errors. 141 requirements across 12 categories; IDs 10 to 1410, unique, all multiples of 10; 48 rows at Revision 2, 77 at Revision 1, 16 at Revision 0. Risk: 107 High, 32 Med, 2 Low. Directives: 97 MUST, 32 MUST NOT, 10 SHOULD, 2 SHOULD NOT.

#	Check	Result
1	Header matches <code>templates/securityConfigGuidance.csv</code> exactly (17 columns)	Pass
2	Every row has 17 fields; category headings are <code>## <Name></code> followed by 16 empty fields	Pass
3	IDs unique, integer, multiples of 10; flat append-only numbering	Pass
4	Eight downstream columns empty on every data row	Pass
5	ID, Revision, Requirement, Rationale, Risk, Cost, References, and Mappings populated on every data row	Pass
6	Exactly one bolded directive per Requirement; no lowercase must, should, or may; every High row uses MUST or MUST NOT	Pass (one lowercase "must" in ID 370 was found and reworded before this run)
7	Risk and Cost limited to High, Med, Low	Pass
8	No non-ASCII bytes, no embedded line breaks	Pass
9	References are live URLs	Pass - 104 of 104 distinct URLs returned HTTP 200
10	Mappings: NIST 800-53 on every row, every identifier and title matching the Rev. 5 OSCAL catalog, parents present for enhancements; segment order HIPAA, NIST 800-53, HITRUST CSF v11; HITRUST references in dotted notation; HIPAA citations in 164.xxx form	Pass - 74 distinct NIST controls; HITRUST CSF v11 on 114 of 141 rows (22 distinct references); HIPAA on 116
11	At least one requirement restricting non-GA features	Pass - IDs 10, 20, 30, 40, 50, 740, 1270, 1320, 1350, 1390
12	No companion markdown file hard-wraps a rendered paragraph (<code>check_md_wrapping.py</code>)	Pass for every Obsidian file; the rendered guidance document carries the known MkDocs admonition false positive
-	No cell references another requirement ID or another SCG	Pass

Requirements per category

Category	Count
General	9
Identity & Access Management	14
Agents & Agent Management	12
AI Models & Model Management	4
Tools & External Integrations	22
Deployment & Channel Security	13
Agent Assist & Human Agent Support	11
Conversation Analytics & Insights	14
Data Protection & Privacy	13
Network & Perimeter Security	10
Monitoring & Analytics	11
Compliance & Certification	8

Warnings

- **HITRUST CSF v11 titles are unverified.** HITRUST is licensed content with no public catalog; confirm the 22 references against the organization's licensed copy before publication.
- **ID 950 is Low risk with a MUST directive.** This is deliberate: the transient stores are low exposure, but the complete data-flow record they belong in is mandatory, so documenting them cannot be optional.
- **eCFR references** (IDs 300, 1100) return HTTP 200 but present a bot check to scripts; the Subchapter G address for 29 CFR 2560.503-1 was confirmed as canonical in a browser on 2026-09-24.
- **Host migration redirects.** 19 references on `cloud.google.com` redirect to the same page on `docs.cloud.google.com`, one to a changed path; all resolve and were left as cited.
- **Launch-stage rows are volatile.** IDs 20, 40, 50, 320, 740, 800, 1270, 1320, 1350, 1360, and 1390 rest on a Preview, Pre-GA, or unreleased status that can change without a release note.
- **Residual documentation gaps.** The Python code tool sandbox identity (ID 450), BAA coverage of Google Search grounding (ID 470), the launch stage of v1beta and v1alpha1 (ID 30), and where the OAuth tool option holds its client secret (ID 370) remain unconfirmed by Google.
